

KEEP THE LOOK

Expert advice for creating an easy to clean, always sparkling bathroom

New bathroom surfaces — in particular glass shower screens — can become stained in a matter of weeks. A glass shower door with a white, cloudy residue that never seems to completely come off could become permanently stained. This is because the mineral deposits in the water multiply causing a chemical change that damages the material.

Homeowners desperate to restore the glass back to its pristine condition may turn to harsh chemicals, abrasive cleaning cloths and lots of elbow grease not realising they could be making the glass look worse.

Your new bathroom's worst nightmare is hard water. When the high mineral content in the water becomes evident as deposits, scale or surface build-up, it results in rundown bathroom surfaces with poor clarity that are costly to maintain, often unable to be cleaned, and may require replacement. So, if you are designing your new dream bathroom or just

about to take your first shower in one, here are EnduroShield's expert tips for preserving that "like new" look.

There are only two truly effective ways to help avoid permanent damage from hard water:
1. Reduce contact with hard water. This might mean installing a water filtration system or at the very least, cleaning and drying the surface after each contact which will help to ensure that minerals aren't left to build up on the surface. While filtration can be costly and daily cleaning is time consuming, these methods will greatly reduce the damage, preserving the surface in its original condition for longer.

2. Protect the surface by making it water and oil repellent. Surfaces treated with a coating such as EnduroShield will help provide protection against water and oil based stains. This will make the mineral deposits left on the surface easier to clean and will help resist staining. While cleaning is still

required, cleaning time and effort will be greatly reduced, the surface won't deteriorate like unprotected surfaces and the clarity of the surface will remain as it ages.

EnduroShield has a substrate-specific coating for most bathroom surfaces that will provide durable protection that makes cleaning easier, with a non-stick barrier resistant to corrosion, etching, and staining, eliminating the need to use harsh and often toxic cleaners.

EnduroShield coatings are suitable for glass, tile and grout; also stainless steel and chrome. The adage prevention is better than cure could not be truer when it comes to keeping bathroom surfaces looking as good as new.
